27th November 2007

Dear Parents,

Conjunctivitis

It has come to our attention that a child in reception has contracted the **eye infection 'conjunctivitis'**.

This is a very contagious infection and should be treated by the family doctor.

If you notice your child's eye is red, itching, weeping and very sticky, particularly in the mornings, please seek advice from your doctor or local chemist (apothek) immediately.

Please note that with the correct medication this infection will clear within a day or two.

Please do not bring your child to school until the infection has totally cleared.

It is also important that you inform the school office as soon as your child is diagnosed with conjunctivitis this will help us to keep the infection to a minimum in the school.

Yours sincerely,

Ann Gibson
School reception
